

Configurare eMail Relay

O soluție pentru trimiterea de emailuri din **WinMENTOR ENTERPRISE** cu adrese de email externe: Gmail, Yahoo și nu numai, este folosirea aplicației **Email Relay** – aplicație ce funcționează ca un server de email, forwardând emailurile din **WME** prin clientul de Yahoo sau Gmail.

Aplicația se descarcă de pe <u>http://emailrelay.sourceforge.net/</u> și se poate instala pe diverse sisteme de operare.

Pașii pentru instalarea aplicației sunt detaliați mai jos:

stallation directory - irectory: C:\Progra		Directories		
stallation directory - irectory: C:\Progra				
irectory: C:\Progra	and the state of the			
	m Files \E-MailRelay			Browse
ool directory

Fig. 2 - Instalare Email Relay

Portul pentru serverul local de **Email Relay** poate fi 25 sau oricare alt port, cu condiția să fie deschis în Firewall.

Fig. 3 - Instalare Email Relay

Pentru clientul de Gmail, setările vor fi cele de mai jos:

Remote server —					
Hostname: smtp.	gmail.com			Port: 587	
Authentication					
Supply authent	ication				
New Account					
Name: raluca	@gmail.com				
Password:					
TLS/SSL encryption					
☑ Use TLS/SSL er	icryption	STARTTLS	C <u>T</u> unn	iel (smtps)	

Fig. 4 - Instalare Email Relay

Trebuie să vă asigurați că nu sunt blocate conexiunile la smtp.gmail.com pe portul 587. In contul de Gmail trebuie setat Less secure app access = ON (https://myaccount.google.com/security).

Atentie! Majoritatea problemelor legate de setarea serverelor de e-mail sunt datorate port-urilor închise (<u>https://www.siteground.com/kb/check-port-blocked-isp/</u>).

Pentru clientul de Yahoo, setările vor fi cele de mai jos:

	SMT	P client			
Remote server					
Hostname: smtp.mail.yahoo.co	m		Port	: 587	
Authentication
